Dear Sir / Madam,

I am writing on behalf of Tog Hackerspace DAC to express our strong support for, and intention to participate in, the **Maps of Making** federated commons project.

Tog Hackerspace DAC is a non-profit Designated Activity Company. Our main objective is to develop an inclusive community interested in the pursuit of innovation in science, technology, modern culture, and the creative arts. We are a self-funded members' organisation that provides a physical space and support for our members and the wider public. Since our founding over sixteen years ago, Tog has been involved in many public engagement activities including Engineers Week, being the home for the TV show *Big Life Fix*, Coolest Projects, Dublin Maker, Coder Girl Hack Day, Inspire Fest, Carnival of Science, and Science Week, to name a few.

We see the Maps of Making project as a valuable piece of shared infrastructure that will strengthen the maker ecosystem locally and internationally. As we understand it, Maps of Making will:

- Create a federated commons infrastructure for makerspace mapping
- Ingest data directly from individual makerspace websites and other sources
- Display aggregated data on a unified map
- Provide map infrastructure that networks and organisations can also embed and use

Such an infrastructure will make it easier for people to discover their local makerspaces, understand what facilities exist around them, and connect communities working on similar challenges.

Tog Hackerspace DAC intends to actively participate in and support this project. In particular, we are committed to:

- Facilitating communication between the Maps of Making team and our community
- Encouraging our members and partner spaces to participate in workshops and share their needs and experiences
- Sharing project updates and communication materials through our internal channels and wider networks
- Supporting the development and refinement of this commons infrastructure by contributing feedback, data about our space, and examples of use in practice

We believe that a shared, federated map of makerspaces will be a powerful tool to connect communities, reduce duplication of effort, and help more people find pathways into making, repair, and creative technology. For these reasons, we are pleased to add our support to the Maps of Making project and look forward to collaborating as the work develops.

Yours sincerely,
Jeffrey Roe
Director
