

RE: Letter of Intention – Maps of Making Project

25th November 2025

To whom it may concern,

The Humanitarian Technology Trust, is a UK Charity focused on the development and scaling of open source technology, we are one of the core organisers of the OpenFlexure Project. The OpenFlexure Project designs laboratory-grade digital robotic microscopes that have been made and used in over 60 countries that *we know of*.

Our project's biggest strength is its distributed community, every member is empowered to build upon our work anywhere in the world. At the same time collecting and curating this data to monitor our impact, report our successes, and learn from our community is difficult and time consuming.

We understand that Maps of Making will:

- Create a federated commons infrastructure for makerspace mapping
- Ingest data directly from individual makerspace websites and sources
- Display aggregated data on a unified map
- Provide map infrastructure that networks can also embed and use

We believe this work will both help us to find new collaborators, and enable us to pair those who need microscopes with those who can build, service, and maintain the hardware.

We intend to:

- Facilitate communication between the Maps of Making team and our community
- Encourage our community to participate in workshops and share their needs
- Share project updates and communication materials with our community
- Support the development of this commons infrastructure

If you require any further details, please contact me directly at julian@httrust.org. More information on the OpenFlexure Project can be found at <https://openflexure.org>.

Yours Faithfully

Dr. Julian Stirling
Chief Executive
